

Social Media:

CHRIS GUIDRY, BLOOMINGTON POLICE DEPARTMENT

What is Social Media?

Social Media is defined as any website and/or application that enable users to create and share content or to participate in social networking.

Social Media

Social Media is not a new concept, having roots in Usenets, BBSs (Bulletin Board Systems) and Internet Relay Chat, which were first used in 1988 and continued to be popular well into the 1990's.

The first recognizable, modern social media site, Six Degrees, was created in 1997. It enabled users to upload a profile and make friends with other users. Six Degrees, at its peak, had approximately one million users.

Social Media

Myspace – founded in 2003, and by 2006 was the largest social network. For some time, it was wildly popular and it is given credit for expanding the reach of social media before Facebook took the reigns from it in 2008.

Social Media: Today

Social Media has become an integral part of modern society. There are social networks with user bases larger than the populations of most countries.

Niche sites exist for virtually every special interest.

Many of the largest social media sites are not based in the United States. They deserve to be mentioned because valuable information could be available if a user has an account.

Social Media: Current (2020)

Most popular Social Media platforms:

Facebook – 2.6 billion users (Old: 2.45 billion +150 million)

YouTube – 2 billion users (Remains steady)

WhatsApp – 2.0 billion users (Old: 1.6 billion + 400 million)

WeChat – 1.2 billion users (Old: 1.1 billion + 100 million)

Instagram – 1.1 billion users (Old: 1.0 billion + 100 million)

TikTok – 800 million users (Old: 500 million +300 million)

Tencent QQ (QQ) – 694 million users (Old: 823 million -131 million)

Sina Weibo – 500 million users (Old: 465 million +35 million)

QZone – 517 million users (Old: 572 million -55 million)

Reddit – 430 million users (Remains steady)

Douyin – 400 million users (TikTok in China)

Social Media: Current (2020)

Number of people globally that use some form of social media: 3.96 billion (2.82 billion - 2019) (2.62 billion - 2018)

Due to Covid-19 restrictions worldwide, there was a monumental increase in online and digital activities globally.

Social Media: The Content

Social Media: The Content

The Cheyenne Rose Antoine case.

Social Media: The Content

This photo was posted to Cheyenne Antoine's Facebook page the evening that she and her friend, Brittney Gargol, went out for an evening on the town.

Antoine is on the left, Gargol is on the right.

Social Media: The Content

The next morning, a passerby discovered the body of 18 year old Brittney Gargol on the side of the road in Saskatoon, Canada.

Under questioning, Antoine told authorities that Gargol went home with an unidentified man the previous night.

But, there's a problem with that explanation...

Social Media: The Content

Along with Gargol's body, a belt was discovered in the vicinity.

Authorities believed it was the murder weapon and was used to strangle Gargol.

The belt looked a lot like...

This one:

Social media: The Content

Antoine was arrested and charged with second-degree murder, but pleaded to a lesser charge of manslaughter.

Antoine maintains that she does not remember killing Gargol, but took responsibility for her death.

Social Media: The Content

People post their everyday interactions on social media, which at first glance may seem mundane, but in time can prove to be both beneficial and/or harmful to a prosecution OR a defense.

The sheer amount of users means that billions of messages, posts, photos, etc are posted daily.

As of January, 2021, there are 190 million Facebook users in the US, however, there are an estimated 120 million fake profiles globally.

On Facebook alone, as of 2021, users upload 350 million photos per day; 14.58 million photo uploads per hour; 243,000 per minute; and 4,000 uploads per second.

Every 60 seconds, 510,000 comments are posted and 293,000 statuses are updated.

6.1 million marketers (advertisers) use FB regularly in 2020.

Social Media: Snapchat

Multimedia messaging app with primary feature consisting of messages and pictures that only last for a short time before being inaccessible to recipient.

Snapchat has consistently evolved from person-to-person messaging, into featuring user's “stories” of 24 hour chronological content.

Allows for augmented reality objects – Snapchat filters.

Primarily used by younger generations, leading to privacy concerns and many cases involving teens sharing inappropriate content. Many cases like this end up with an underage user's photo(s) being shared out without their knowledge or consent.

Social Media: Snapchat

As of Q3 2020, there are over 249 million active daily Snapchat users.

101.4 million of those are in North America.

Snapchat reaches 75% of millennials and Gen Z.

Average daily snaps created in Q3 2020 was over 4 billion.

About 2.1 million snaps are created every 60 seconds.

Snapchat is ranked as the 2nd most used messaging app in the US.

Active users open Snapchat in excess of 30 times daily.

Snapchat confirms increased engagement on ads, with a 36% increase in install volume for app ads.

Social Media: Snapchat

Children as young as six among hundreds of underage ‘sexting’ offence suspects

Many under-18s are unaware they are committing a crime, detectives say

Children as young as six have been investigated by police over sending and receiving **sexual images**, Scotland Yard has revealed.

More than 350 children aged between six and 13 were treated as suspects in reported “sexting offences” between January 2017 and August.

Investigations of under-14s have increased dramatically since they were first recorded, with 92 in 2017, 151 in 2018 and 110 in the first six months of last year.

Social Media: Snapchat

Boy stabbed to death while dozens of teenagers watched and filmed attack

Footage of the fight was posted to Snapchat and other social media platforms

A 16-year-old boy was stabbed to death while dozens of teenagers watched or used their phones to film an after-school assault.

Police have charged 18-year-old Tyler Flach with second degree murder following the death of **Khaseen Morris** on Monday at a mall near Oceanside High School in Nassau County, **New York**.

Police say 50 to 70 bystanders witnessed the attack but failed to call police or defend Morris. Footage of the brawl was posted to **Snapchat** and other social media platforms, according to police.

Social Media: Snapchat

“I want to plead with all our residents -- not just our young people: If you see someone in serious danger, please use your phone to get help - not likes and shares,” Ms Curran said. “Our law enforcement and first responders are trained to save lives in dangerous situations, and someone’s life can depend on a matter of seconds.”

Social Media: TikTok

TikTok is a short-form video sharing app that allows users to make and share 15-second videos on any topic.

Formerly known as Musical.ly, which had a similar format, but focused on users making lip sync videos. Musical.ly was purchased by Chinese firm ByteDance in 2018. The app was re-branded as TikTok and all users were automatically moved to the new platform.

Social Media: Psychology

After almost two decades of social media use, scientists are now beginning to understand the psychology of it.

Dopamine: Scientists used to think dopamine was a pleasure chemical in the brain, but they now know that it actually creates “want”.

Dopamine causes us to seek, desire, and search.

Dopamine is stimulated by unpredictability, small bits of information, and by reward cues – pretty much the same conditions that are found on social media.

The pull of dopamine is so strong that studies have shown tweeting can be harder for people to resist than cigarettes and alcohol.

Social Media: Psychology

Oxytocin – Known as the “love hormone”. It is raised by hugging and kissing. It acts as a neurotransmitter in the brain and plays a large role in mother and child bonding as well as in pair bonding.

It also rises when someone tweets. In one experiment, after just 10 minutes of being on Twitter, Oxytocin levels rose as much as 13% - a hormonal spike equivalent to a groom who was monitored on his wedding day.

In Context: Survey (UK)

53% of people had anxiety when they couldn't use their phone.

61% said they couldn't go without their phone for a week.

66% said they couldn't go without – for one day.

Source: itstimetologoff.com

Social Media: Retention

All major social media networks have data retention policies. I would encourage anyone conducting work with social media to read those policies.

Exactly what kind of data is retained and can be supplied by social media giants?

Social Media: The Data

All data that is posted to that specific account by the user, including photos, messages, posts, status updates, etc.

Email address(s) used to sign up / login to account.

Account creation IP address, login IP addresses.

Networks and connections, including people, pages, accounts, hashtags, groups, etc.

Social Media: The Data

Important to remember that much of this data can be deleted or removed by the user, which means that it's always a good idea to....

Preserve the account. Some providers make it easy with an online tool (mostly for law enforcement only), but most will require a preservation letter. This can preserve both exculpatory as well as inculpatory evidence.

Social Media: The Data

Just how much data is being harvested on the billions of users?

For starters, both Google and Apple knows where you've been.

Google knows everything you've ever searched...and deleted. Search history is shared across devices.

Google has an advertisement profile of you, which includes your location, gender, age, hobbies, career, interests, relationship status, weight and income.

Social Media: The Data

Google and Apple know every app that you use or have used.

Google has your entire YouTube history.

The data that Google has on you can fill millions of Word documents, for a single user.

Facebook has reams of data too, including every message you've ever sent or received, every file you've sent or received, as well as all of the audio messages you have as well as all of the contacts in your phone.

Facebook also collects all data in relation to things that you've "liked", including things that you and your contacts even talk about in messages or posts. All of this data is harvested in order to more precisely target individuals with advertisements.

Facebook stores information every time you log in, where you logged in from, what time you logged in, and from which device you logged in on.

Social Media: The Data

Certain applications can access your webcam and microphone.

The data they collect includes tracking your location, what apps you have, when you use those apps, what you use them for, your contacts, your emails, your calendar, call history, messages sent and received, downloaded files, games you play, your photos and videos, your music, search history, browsing history and even which radio stations you prefer.

Social Media: Practical

Let's test this.

Take out your cell phone.

Apple iPhone → Settings → Privacy → Location Services → System Services → Significant Locations.

The location service can be turned off from this screen as well. Apple has said that when location services are turned off, none of that data is transferred back to their servers.

Social Media: Practical

Android:

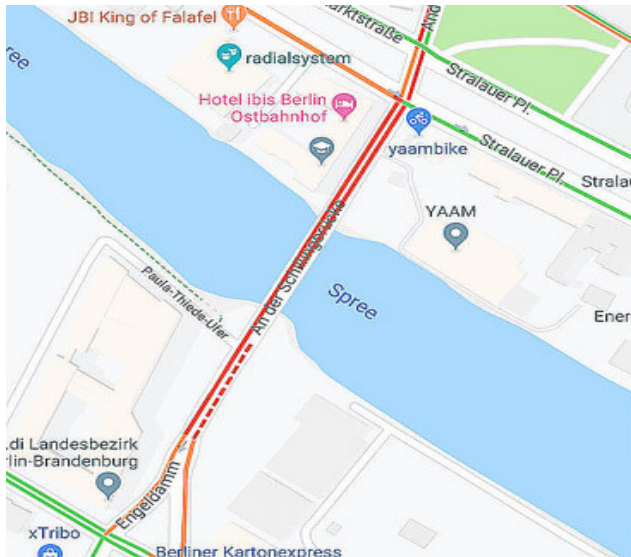

Settings → Privacy → Google Location History → Manage Activity.

This opens Google Maps and shows not only your location history data, but also movement data and how long it took to travel from location to location.

This is how Google figures out traffic patterns and slow traffic on the map.

Social Media: Practical

February 3rd, 2020: Man uses 99 phones and a wagon to create a “Virtual Traffic Jam” on Google Maps.

Social Media: Practical

In 2018, the New York Times took a look at the common practice of location sharing, here is what they found:

“To evaluate location-sharing practices, The Times tested 20 apps, most of which had been flagged by researchers and industry insiders as potentially sharing the data. Together, 17 of the apps sent exact latitude and longitude to about 70 businesses. Precise location data from one app, WeatherBug on iOS, was received by 40 companies. When contacted by The Times, some of the companies that received that data described it as ‘unsolicited’ or ‘inappropriate.’”

Social Media: Practical

So app developers are sharing your location with any number of unknown advertisement companies, what can you do?

IOS – Only allow apps to know your location “Only while using the App.”

Android – Now has the same option, however, it’s more difficult to get to and requires going through app permissions in settings.

Social Media: Practical

You can turn off location sharing, but that means you won't be able to access many features of many apps.

Maps will not route directions, weather apps will not be able to tell you about your local weather, no app will be recommending good restaurants in your area, and you won't see traffic hazards or speed traps on your maps.

It is up to you to determine if you want privacy, or convenience.

Social Media: Practical

EXIF data:

Exchangeable Image File Format.

A type of Metadata that contains information on both image and sound files. What type of camera, model, date / time, exposure, location in latitude/longitude, etc.

It is possible to accidentally expose your location to anyone when you upload photos taken with your cellphone to some places.

Most social media sites strip this data, however, some do not.

Social Media: Practical

Social Media: Obtaining the Data

There are three ways for law enforcement agencies to obtain data from social media platforms:

- Subpoena: Basic subscriber records, which may include name, length of service, credit card information, email addresses, and recent login/logout IP addresses, if available.
- Court Order: Information pertaining to the account, not including content of communications, which may include message headers and IP addresses, in addition to the basic subscriber records identified above.
- Search Warrant: Upon a showing of probable cause, can compel the disclosure of all stored content of any account, which may include messages, photos, videos, posts and any location information.

Social Media: Obtaining the Data

Data can be obtained from multiple sources, not just service providers; IE Facebook, Google, SnapChat, etc.

Forensic processing of mobile devices can display a wealth of information and data under many circumstances.

Forbidden: The “deep/dark”

Forbidden Territory: The Dark Web

What exactly is the Dark Web?

Simply, it's the World Wide Web content that exists on darknets that use the same infrastructure of the internet, but require specific software, configurations, or authorization to access.

“Dark Web” and “Deep Web” are often used interchangeably, but they are different. The Deep Web is all content that is not indexed by search engines, or that requires a specific login. For example, your financial information is considered “Deep web” content, as is medical records, legal documents, academic information, government resources, etc.

The Dark Web is also not indexed, because it cannot be seen by “normal” browsers. These locations typically need some sort of authentication or cryptography to access.

Sounds fun! How though?

So, how do we access it?

I'm glad you asked, because I'm going to show you one easy way.

Tor. The Onion Router.

Tor is open source software used to enable anonymous communication by directing traffic through a worldwide, volunteer overlay network consisting of thousands of relays. This helps to conceal a user's location and usage from anyone conducting network surveillance and traffic analysis.

Tor can be downloaded for free by anyone in the form of a forked Firefox browser.

Tor is both lauded and criticized, for simultaneously empowering people with privacy and acting as a vehicle for criminal activity.

Tor was used by Edward Snowden to leak PRISM information to the Media.

The Dark Web

What's on the Dark web? Let's take a look!

USEFUL INFORMATION

WHAT TO DO WITH THIS CREDIT CARDS?

There are several options:

- Cash out money from the card.
- With holder's personal info you can buy something in online store.
- You can buy something in the store, as all cards are with PIN-code.
- Link card to PayPal account and spend money.
- Enroll online banking account and send money online or exchange to another payment system.
- You can also come up with other options...

CASHING OUT MONEY FROM CARDS DON'T FORGET ABOUT YOUR SAFETY:

- Don't show your face, each ATM has few cameras.
- Don't cash out very large amount or more than one card at one ATM.
- Cashing out money from ATM, be natural as it is your cards.

ANSWER

Why are your products so cheap?

Our products are sold at competitive prices mainly because they are obtained using leaked credit card & PayPal billing information. Data is first acquired, gift cards are bought using the data and then used to purchase goods on various clearnet stores in order to further anonymize the purchase.

Then why don't you just sell these products on eBay, Amazon, etc. yourselves?

In fact, we do. However, dealing in large unaccounted (i.e. no Tax paid) amounts causes high suspicion so the remainder of our main business' products is sold here.

Shipping

Your order will be shipped within 24 hours after ordering. Its always vacuum sealed with decoy. Every package is checked twice before shipping. Shipping to the EU is always possible whatever quantity. We don't ship to the Netherlands.

We sometimes send parcels using tracking even if the customer has selected 'regular shipping'. This is to prevent scammers trying to claim an undelivered parcel. We don't do this with every parcel mind you and we only using the tracking information in case of a dispute.

Please keep in mind that if you place an order during the weekend it will only be shipped on Monday. Take that into account when calculating the delivery time. Also, during holidays postal services are overwhelmed with parcels and staff shortage so there will always be a delay of a few days in delivery time.

We might mark the order as shipped even though we might actually send it a day later. This is to prevent LE from trying to identify our delivery pattern.

Tracking information is available upon request. It's imporant to remember that we can delay the release of the tracking code if we think it might jeopardize our security protocols or we might not release it at all, only in case of a dispute.

We cannot ship domestically (NL) using tracking code due to OPSEC protocols. We don't do face to face or pick-up deliveries either, only through post.

We advise customers from Germany to use only the Regular Shipping option because with the Tracking code Europe option they might encounter problems with the Hermes Group (stealing parcels, failed deliveries, etc). The Regular Shipping option to Germany has 100% success rate so don't worry.

Rent-A-Hacker

Experienced hacker offering his services!

(Illegal) Hacking and social engineering is my business since i was 16 years old. I never had a real job, so i had the time to get really good at hacking and i made a good amount of money last +-20 years.

I have worked for other people before, now i am also offering my services for everyone with enough cash here.

Prices:

I am not doing this to make a few bucks here and there, i am not from some crappy eastern europe country and happy to scam people for 50 EUR.

I am a professional computer expert who could earn 50-100 EUR an hour with a legal job.

So stop reading if you don't have a serious problem worth spending some cash at.

Prices depend a lot on the problem you want me to solve, but minimum amount for smaller jobs is 250 EUR.

You can pay me anonymously using Bitcoin.

Technical skills:

- Web (HTML, PHP, SQL, APACHE)
- C/C++, Assembler, Delphi
- 0day Exploits, Highly personalized trojans, Bots, DDOS
- Spear Phishing Attacks to get accounts from selected targets
- Basically anything a hacker needs to be successful, if i don't know it, i'll learn it very fast
- Anonymity: no one will ever find out who i am or anything about my clients.

Social Engineering skills:

- Very good written and spoken (phone calls) english, spanish and german.
- If i can't hack something technically i'll make phone calls or write emails to the target to get the needed information, i have had people make things you wouldn't believe really often.
- A lot of experience with security practices inside big corporations.

What i'll do:

I will do anything for money, i'm not a ██████. If you want me to destroy some business or a persons life, i'll do it!

Some examples:

- Simply hacking something technically
- Causing alot of technical trouble on websites / networks to disrupt their service with DDOS and other methods.
- Economic espionage
- Getting private information from someone
- Ruining your opponents, business or private persons you don't like, i can ruin them financially and or get them arrested, whatever you like.

If you want someone to get known as a child porn user, no problem.

Welcome to the ***Vanetti Mob Network*** on the Dark Web!

Biggest provider for ***Murder*** and ***Kidnapping*** services since 2017.

This hidden service is used as a middleman between customers and contractors. Click on *Services* above to view a full list of services we can provide you with.

We work with your budget unlike what competitors offer at a fixed price!

When you are ready to place a request click on *Hire Now* and follow the steps to continue.

We are currently hiring new contractors! Click on *Join Us* to learn how to apply.

If you are not interested in joining but still want to make some money then click on *Earn Money* to learn how.

The Data: The End

It's important to remember that everyone leaves a data-trail miles long when they use online services, especially social media. All of the data that they collect can theoretically be procured by agencies in the course of an investigation.

Social Media – whether in the form of Twitter, Facebook, YouTube, or any number of other online communities – has long passed the phase of being a fad. It is here to stay, it has a massive amount of influence, and it is incumbent upon everyone to know what data you may be leaking.
